

# 3M™ Trizact™ Blending Discs

- Ideal for keying panels prior to the application of clearcoat or before blending
- Suitable for both machine and hand application
- Foam construction ensures conformability and achieves a uniform, quality matt finish.

# 3M™ Trizact™ Blending Disc 50341

For large, small and awkward areas - machine or hand application.

The popular Trizact abrasive range has been extended to include a P1000 version designed for keying panels prior to the application of clearcoat or before blending.

The unique pyramid construction of Trizact abrasives ensures even wear and long life providing a consistent scratch depth throughout the sanding operation. The new Trizact blending disc 50341 uses the 3M Hookit™ Fixing System and is compatible with all 3M™ 150mm Back-up Pads.

For small awkward areas and panel edges the Blending Disc can be used by hand. For best results use in conjunction with accessory items Hand Pad 05791 and or Half Pad 05792.

The Blending disc should be dampened with water (not solvent) before use. Conformability is achieved through the unique foam construction of the product, allowing even pressure to be applied in both machine and hand applications when sanding deep into orange peel pockets. The result being a quality, uniform matt finish that is now ready for painting.

*Fitting the Blending Disc to a Hand Pad for hard-to-reach areas – the pad has a rear strap to fit over the operator's hand.*

*Using a Soft Interface Pad 05774 increases the ability to sand contours.*

*The uniform matt finish is ready for painting.*

## Proven science applied to new 3M™ Blending Abrasives

Trizact abrasives are manufactured using Micro-replication technology – the science of creating tiny three-dimensional structures and then replicating them on to a material – in this instance pyramid shaped layers of abrasive mineral, coated on a film for improved durability during hand use and then bonded to foam with a Hookit backing. The total surface area is then perforated to allow water to move through and keep the surface lubricated, thus preventing premature loading. During sanding and as the abrasive wears, fresh, sharp minerals are continuously exposed. The result is a consistently smooth, superior finish.

*Unique pyramid - shaped structure of Trizact™ abrasive.*

Product	Part No
3M™ Trizact™ Blending Discs P1000 (150mm)	50341
3M™ Trizact™ Hand Pad (150mm)	05791
3M™ Trizact™ Half Pad	05792
